NIKKI RAE

Senior Full Stack Engineer | Agile Methodologies

+447542763672 nikkiandrewrae@gmail.com Lincolnshire, UK www.nikkirae.dev

SUMMARY

AI-Enabled Senior Full Stack Engineer with 8+ years delivering production-grade applications from concept to scale. Experienced leading modernisation projects — migrating legacy architectures to modern TypeScript stacks, embedding AI-powered features, and establishing robust engineering practices. Adept at reviewing and validating AI-generated code: evaluating output for correctness, security vulnerabilities, and architectural alignment before it reaches production.

EXPERIENCE

Senior Full Stack Developer *SimplyCook*

London, UK - Remote June 2026 - Current

• Founded the company's internal Claude Code plugin marketplace, standardising AI-assisted development across the product team. This includes convention guides, scaffolding skills and review agents for frontend, API, accessibility and test planning.
• Owned subscription onboarding end to end, from AWS API Gateway and NestJS endpoints through to the UI. Delivered allergen-conflict detection, redesigned the recipe box builder and an accessible cart drawer.
• Hardened authentication and access control across the platform. Replaced scattered, conflicting checks with a single derived "journey state" model. Fixed a Cognito token-refresh race in the shared auth package.

Full Stack Developer *Powdr*

Manchester, UK - Hybrid April 2025 - June 2026

• Contributed to a full-stack modernisation, transitioning a Java monolith to a NestJS API layer and modernising the frontend architecture to a component-driven, reactive state model — improving scalability, developer velocity, and long-term maintainability.
• Architected AI-powered Insights pipelines, implemented automated UI and calculation testing, and established nightly build workflows — cutting QA overhead and regression risk significantly.
• Embedded AI-assisted development practices across the team: structured review workflows for LLM-generated code covering logic validation, API hallucination detection, security constraints, and prompt engineering standards — directly contributing to onboarding the company's first enterprise client.

Full Stack Developer *SRC UK*

Lincoln, UK - Hybrid Oct 2023 - Apr 2025

• Engineered two production applications leveraging GCP Gemini, delivering end-to-end full-stack solutions with optimised frontend performance and scalable backend architecture.
• Drove migration of legacy micro-frontend services to a TypeScript/Vite microservice architecture, reducing build times and improving DX, maintainability, and pipeline scalability.
• Evaluated and benchmarked LLM capabilities for project integration, producing technical recommendations adopted cross-functionally; mentored junior devs through code reviews and agile task prioritisation.

SKILLS

Client-Side

React TypeScript Jotai Vite Zustand Tanstack NextJS Jest

Server-Side

NodeJS ExpressJS GraphQL Apollo MongoDB PostgreSQL NestJS

Development & Operations

AWS CI/CD Git DigitalOcean Agile Scrum Docker Playwright

PROJECTS

Wavio

wavio.co.uk

B2B SaaS platform streamlining compliance, operations, and regulatory reporting for UK social housing providers.
• Provisioned and automated AWS infrastructure using Terraform, spanning Dev, Staging, and Production environments with full CI/CD pipeline orchestration.
• Architected a modern full-stack system
• Delivered iteratively using Agile methodology, maintaining a rapid release cadence from solo engineer to early enterprise clients.

EDUCATION

B.S, Information Technology
Brigham Young University
Provo, UT, USA
Sep 2012 - Apr 2018

SERVICE

Estonian Speaking Volunteer

Religious Organisation

Estonia 2019 - 2021

Led a group of volunteers, conducted weekly training meetings, followed up on weekly goals, and created weekly progress reports.
